

College of Insurance
Insurance Institute of India, Mumbai
Classroom Training Session on Appreciation of
International Classification of Diseases for Insurance
(ICD) and Health Insurance (CT-AICDI)
(From: 27th to 28th February, 2025)

Program Concept and Objectives:

The Healthcare sector is becoming increasingly challenging day by day. Medical diagnosis and treatment have become increasingly complex. Consequently, today's insurers need to increase their knowledge and improve their technological skills to be competitive. They need to understand the changes in the market by analysing data relating to many diseases, treatment protocols and the costs involved. For such deep and detailed analysis, they need to understand standardized medical terms, precise coding, and data at granular levels.

Efforts towards standardization are ongoing worldwide over many years. Classification of medical data is essentially the transformation of verbal descriptions of medical diagnoses and procedures into universally acceptable code numbers. The most widely used coding protocol specific to healthcare is the International Classification of Diseases (ICD) which relates mainly to (i) **Diagnostic codes** used for diseases, disorders and symptoms and facilitate measurement of morbidity and mortality, (ii) **Procedure codes** used to identify specific health interventions taken by medical professionals, (iii) **Pharmaceutical codes** used to identify medications and (iv) **Topographical codes** that indicate a specific location in the body. Coding Health Insurance related data using ICD codes helps in identifying the frequency of diseases within specific geographies, age groups, occupations, behavior groups and other sub-strata of the market. These codes, especially, the Diagnostic and Procedure codes are widely used by the insurance industry to analyse diseases, medical procedures and interventions. The coding is typically done usually using health management software at clinics, hospitals and Third Party Administrators (TPAs).

College of Insurance has designed this program to focus on the Classification of Diseases and Coding. While the programme is open to both medical and non-medical professionals, on order to make it meaningful to those who are not exposed to medical/ paramedical knowledge, there will be an introductory session on human anatomy, disease types and basic medical matters.

Key Takeaways from the Program:

- Providing the participants a basic understanding of human anatomy
- Familiarizing them to diseases, disease types, diagnostics and basic medical interventions
- Reviewing common practices in health insurance
- Creating awareness of standards in the healthcare industry

College of Insurance
Insurance Institute of India, Mumbai
Classroom Training Session on Appreciation of
International Classification of Diseases for Insurance
(ICD) and Health Insurance (CT-AICDI)
(From: 27th to 28th February, 2025)

- Appreciation of ICD codes and analyses
- Understanding basic analytical studies based on coded data.

Participant Profile:

The program is open to persons having a fair awareness of health insurance and need to know more about classification of diseases, coding and healthcare analysis.

Participants can be from insurance companies, third party administrators, brokers and those involved in data analysis. The program is open for medical doctors as well as to those who are not exposed to medical/ paramedical knowledge.
